17th International Breast Cancer Congress

Prof. Mohammad Esmail Akbari

Professor of Surgical Oncology

Head of 17th International Breast Cancer Congress
Head of Cancer Research Center, Shahid Beheshti University of Medical Sciences

Welcome Message

In the name of GOD

Thanks GOD for the 17th year in succession to present the International Congress on Breast Cancer and to have a fortune to attend your appointment. Today as previous congresses, we will discuss about prevention, diagnosis and treatment of the major health problems around breast cancer with cooperation of international colleagues to serve you the best.

Because the breast cancer is the most common cancers in Iranian women and men per year, affecting over 16,000 people, this necessitates the clarification of national and international standards for diagnosis and treatments today. The issue of personalization of medicine has been taken into account, which forms the core of Precision Medicine.

Diagnostic methods of what today are in the clinical and imaging and other Para clinic facilities tissue such as liquidated biopsies and to the discovery of deformed proteins in various forms of blood flow again such as Free DNA, CTC, DTC ... that today are getting improved. It makes it possible to detect cancer much earlier than existing imaging facilities.

The nature of diagnosis and treatment in the form of biological principles, social affairs, psychology and spirituality has become more prominent and provided in the form of multi-expert teams to patients that translate the precision medicine in reality.

This year, we will introduce changes in the diagnosis and the management of breast cancer with the transfer of national experience that we hope to be a worthy servant for you, the great science talent. we will provide our people and patients with a more wisdom and more compassionate service, which is the easiest way to win divine mercy. Here, take a chance, I warmly welcome all of you and our guests from abroad and hope they have nice trip and staying in beautiful Tehran.

Prof. Hamid Reza Mirzaei

Scientific Secretary

In the Name of God

I am grateful to be holding the 17th international congress of breast cancer. First of all, I would like to welcome you all professors, colleagues and respected guests from different disciplines to our conference this year. It is a pleasure to have you all here mainly because you give us the motivation to continue with organizing important future meetings like this.

The high prevalence of breast cancer in women and the growing trend of this disease implies running our annual meetings is more crucial than ever before. It has been more than a decade now that we have been hosting this annual congress by Cancer Research Center, aiming to exchange and disseminate knowledge and research amongst respected colleagues by presenting and sharing the latest scientific findings, organizing panels, and poster presentations from highly valued participants, showcasing the importance of this social-medical problems.

One of the main goals of this congress is exchanging scientific research and information and striving to provide the latest news of this disease. In fact, the aim is that such meetings would be beneficial to our patients, supporting more reliable diagnostic methods and more effective treatments. The congress also aims to be able to provide solutions for managers and policy makers in the field of health and cancer.

Through this valuable meeting, we get to know innovative modern surgeries/procedures and we will also cover the importance of early diagnosis. The hope is that the outcomes of discussions in this congress could be an important step in making more accurate initial diagnosis and can increase the survival rates of our patients as well as improving the quality of their lives whilst coping with and receiving treatments for their breast cancer. Such important achievement can be the result of the worthy effort of the scholarly and sympathetic members of the Executive Committee and the Secretariat of the Central Committee of Cancer Research Center over the years, Thank You.

17th International Breast Cancer Congress

Dr. Mohammad Hadizadeh

Executive Secretary

Welcome Message

In the name of GOD

Thanks God that with the help of the International Breast Cancer Congress, we will promote the development of space science and researches and analysis. AS the breast cancer is the most common cancer among women and has a low incidence in men, it accounts also as one of the most important goals and focus areas in health systems. The average age of diagnosis among Iranian women is 45 to 55 years of age compared to other Western countries that is about ten years younger. Since early detection of breast cancer is directly linked with increased awareness, it can be a key component in the prevention and improvement the quality of the treatment.

Now, after a year of holding the International Breast Cancer Congress, academic and administrative activities of the Congress have been completed. I, as the executive secretary of the 17th International Breast Cancer Congress have thanks and gratitude from the executive team for their unwavering cooperation. Their cooperation and tireless efforts make to alert the experts and access to updated scientific information.

I hope that the experiences which gained from the former Congresses at Cancer Research Center of Shahid Beheshti University of Medical Sciences will also be held more fruitful of presented congress and these efforts will lead to the promotion of health.

Yours Sincerely,

Congress Organization
